Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Terminal Disclaimer

2. The terminal disclaimer filed on 07-03-06 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of US 7,006,069, has been reviewed and is accepted. The terminal disclaimer has been recorded.

Allowable Subject Matter

- 1. Claims 1-8 are allowed.
- 2. The following is an examiner's statement of reasons for allowance: Claims 1-8 are allowable as pointed out by the applicant in the terminal disclaimer filed on 07-03-2006.

The prior arts Lee, Kim et al, and Battersby fails to teach a display device comprising the data driver circuit alternately repeats (i) a first step for generating a display signal corresponding to each one of the lines of the video data one after another for every fixed period and outputting the display signal to the pixel array N-times (N being a natural number equal to or greater than 2) and (ii) a second step for generating a display signal which makes the luminance of the pixels lower than the luminance of the pixel in the first step for the fixed period and outputting the display signal to the pixel array M-times (M being a natural number

smaller than N), the scanning driver circuit alternately repeats (i) a first selection step for selecting the plurality of pixel rows for every Y rows (Y being a natural number smaller than the N/M) sequentially from one end to another end of the pixel array along the second direction in the first step and (ii) a second selection step for selecting the plurality of pixel rows other than the pixel rows

(Y.times.N)selected in the first selection step for every Z rows (Z being a natural number not smaller than N/M) sequentially from one end to another end of the pixel array along the second direction in the second step, and the display device further includes a means which sets a ratio of display in the second step per one frame period, and a means which measures the number of pulses of a horizontal synchronizing signal in one frame period contained in the video data, and determines a point of time for starting display in the second step in response to pulses of the horizontal synchronizing signal corresponding to the ratio based on a measured value of the number of pulses as claimed in Claim 1.

The closest prior art, Lee, Kim et al, and Battersby, either singularly or in combination, fail to anticipate or render the above bold and underlined limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
